Update your fleet with tomorrow's solutions

SMARTCONSTRUCTION
Retrofit

An easy and affordable way to add 3D guidance and payload monitoring

Even with a mixed fleet, you can give operators in the field and managers in the office access to 3D design and topography data — information that helps drive accuracy, control load volumes and promote optimized operations. Smart Construction Retrofit is an affordable way to bridge the technology gap on your job site.

Fast results

Drive rapid production improvements to most sizes of machine excavator with a bring-your-own devices configuration, easy-to-use 3D guidance features and payload monitoring.

Address labor shortages

Reduce the need for additional labor with technology that collects and delivers information directly to the operator, so fewer people can be working on the ground.

Affordable technology upgrade

Lower the startup costs of bringing technology to your operations — or expanding it — with compact and modular kits that are locally-installed and fit most sizes of Komatsu excavator models.

Progress tracking

Monitor machine production from the office by integrating Smart Construction applications. Collect as-built data that can be used for reports and plans.

Drive improved material accuracy

Place material both effectively and quickly with reduced handling. Drive both productivity and profitability by providing operators with high-precision position data.

Our technology solutions experts can help guide and support you
